

Save Recorded Calls to Your Gmail Account with Skype Recorder Software

The ability to save recorded Skype calls to your computer is often essential, especially in cases where many important calls are being made through Skype as they are these days. Whether they are multi-user conference calls or important private discussions, job interviews or anything else, the ability to record such calls is crucial. However, for these, you need Skype recorder software, a third-party solution that will take care of the work for you. By itself, Skype has no such feature that allows you to do this. Piston Software's Skype Recorder provides you with the solution, also offering you some useful extra features as well such as the ability to automatically save your recorded calls to a Gmail account.

While there are other solutions which allow you to record Skype calls, Piston Software's solution provides some unique and highly useful features. Recorded conversations can be stored in a Gmail account or locally in your own computer. Remote storage provides you with a way to save space on your hard disk and keep your records as safe and secure as possible. It also means, most significantly, that you can access your recorded calls from anywhere. Since they can be stored on your Gmail account, all you will need to retrieve them is access to the Internet. Files are saved in the MP3 format as well for increased efficiency and lower file sizes and with the enormous amount of free space offered by Gmail these days, you shouldn't be running out any time soon.

When Skype records are saved to your Gmail account, the history is automatically labeled in your inbox, so it is always easy to find the data that you need. With approximately 7.5 gigabytes of free space available on a Gmail account, that allows you the possibility to store over 250 hours of recorded conversations. The automated and straightforward process of working with your records will save time and provide you with an efficient solution.

There are many uses for Skype recorder software, though for businesses that regularly communicate using Skype, recording software is most important of all. Many companies need to record calls for training or security purposes and with an increasing number of companies and individuals using Skype on a regular basis, the need to recording software is higher than ever before. Skype recorder software also provides a useful solution for parents to monitor their children online and keep a degree of control over their communications and who they communicate with.

Finding your records is also easy as all relevant details will be provided and you can search through the records by using Gmail's common search interface. The software also offers a pleasant and intuitive interface which is easy to use straight out of the box. It is also offered in a number of different languages. The software also allows chat history to be recorded and uploaded automatically to Gmail.
